Cautionary statement

This presentation has been prepared and published solely for informational purposes. Nothing contained in this presentation is intended to constitute an offer, invitation or inducement to engage in an investment activity.

In this statement, "presentation" means this document together with any oral presentation, any question or answer session and any written or oral material discussed or distributed during the meeting.

In making this presentation available, Syncona Ltd makes no recommendation to purchase, sell or otherwise deal in shares in Syncona Ltd or any other securities or investments and you should neither rely nor act upon, directly or indirectly, any of the information contained in this presentation in respect of such investment activity. This presentation has not been approved by an authorised person or by any supervisory or regulatory authority.

This presentation speaks as of its date and the information and opinions it contains are subject to change without notice. Neither Syncona Ltd nor its affiliates, agents, directors, managers and advisers (together "representatives") are under any obligation to update or keep current the information contained in this presentation.

The information and opinions contained in the presentation do not purport to be comprehensive. This presentation has not been independently verified. No representation, warranty or other assurance, express or implied, is or will be made in relation to, and no responsibility is or will be accepted by Syncona Ltd or its representatives as to the accuracy, correctness, fairness or completeness of, the information or opinions contained in this presentation. Syncona Ltd and its representatives accept no liability whatsoever for any loss or damage howsoever arising from any use of this presentation or its content or otherwise arising in connection with it.

The presentation may contain "forward-looking statements" regarding the belief or current expectations of Syncona Ltd and its representatives about the financial condition, results of operations and business of Syncona Ltd and its portfolio of investments. Such forward-looking statements are not guarantees of future performance. Rather, they speak only as of the date of this presentation, are based on current views and assumptions and involve known and unknown risks, uncertainties and other factors, many of which are outside the control of Syncona Ltd and are difficult to predict, that may cause the actual results, performance, achievements or developments of Syncona Ltd, its current or future investments or the industry in which it operates to differ materially from any future results, performance, achievements or developments expressed or implied from the forward-looking statements. In particular, many companies in the Syncona Ltd portfolio are conducting scientific research and clinical trials where the outcome is inherently uncertain and there is significant risk of negative results or adverse events arising. In addition, many companies in the Syncona Ltd portfolio have yet to commercialise a product and their ability to do so may be affected by operational, commercial and other risks.

The target return of Syncona Ltd referred to in this presentation is based on performance projections produced by Syncona Ltd and its representatives to the best of their knowledge and belief. It is a target only and therefore subject to change. There is no guarantee that such target return of Syncona Ltd can be achieved and past or targeted performance is no indication of current or future performance or results. There can be no assurance that the strategy described in this presentation will meet its objectives generally, or avoid losses.

This presentation is not for publication, release or distribution, directly or indirectly, in nor should it be taken or transmitted, directly or indirectly into, any other jurisdiction where to do so would constitute a violation of the laws of that jurisdiction. The distribution of this presentation outside the United Kingdom may be restricted by law and therefore persons outside the United Kingdom into whose possession this presentation comes should inform themselves about and observe any such restrictions as to the distribution of this presentation.

Strategy and vision

Building the next generation of healthcare leaders

Founded in 2012 by The Wellcome Trust, our purpose is to invest to extend and enhance human life

Globally significant scientific research base

Leverage the quality of the European life science research base

01

Focus on products and patients

Select technology that can:

- deliver dramatic efficacy for patients
- credibly be taken to approval by an innovative biotech

02

Founding companies with strategic ownership

Invest through company life cycle to maintain significant ownership positions, enabling:

- strategic influence; leveraging expertise in Syncona team
- participation in the out return available from taking products to approval

03

Long-term, ambitious capital

A strong strategic capital base to fund ambitiously over time frames necessary to develop innovative medicines

04

Strong track record and expert team with deep scientific and commercial expertise and extensive experience working with global key opinion leaders and appointing leading management teams

Capturing the out return in life science

Strategy designed to deliver strong risk adjusted returns for shareholders

Out return in life science weighted towards late development and product approval:

- Set companies up with the ambition of taking products to market
- Target the steepest part of the value curve

Graph is illustrative and assumes successful clinical development and approval, Syncona team view

Delivering value through biotech company creation

Building sustainable companies and delivering transformational outcomes for patients

Strong track record

38%

Gross IRR since inception (2012)

1.8x

Gross multiple on invested capital

£607m

Value of exits from the portfolio¹; £510m realised gain

6.2x

Gross multiple on realised companies; aggregate IRR 72%

Building sustainable leaders

£740m

Capital deployed since 2012

15

Syncona companies founded and invested in since 2012

3

Companies progressed products through to pivotal study, including 1 delivered marketed product to patients

13

Programmes progressed to clinical stage

Patient impact

The background is a solid teal color with several large, overlapping geometric shapes in varying shades of teal. These shapes include circles and triangles, creating a layered, abstract effect. The text "Found and Build" is centered horizontally and partially overlaid by one of the shapes.

Found and Build

What do we look for in a scientific asset?

Our approach to company creation and development

Translating technology to products to reach full value potential

Our partnership approach provides a strategic premium

Focus on founding companies

Optimises strategy, control, ownership and returns

Strategy: ensure company targets products that can credibly be taken to approval / market

Influence: sole or majority investor position maximises ability to influence company, especially in crucial early years when strategy and management are set

Ownership and returns: aim for best cost basis of any investor, supporting opportunity to deliver best returns for shareholders

Company	Founded by Syncona	Syncona majority ownership position
	✓	Largest investor (27%)
	✓	Largest investor (48%)
	✓	✓
	✓	Largest investor (34%)
	✓	✓
	OSI (seed)	Largest investor (49%)
	UZH Fund (seed)	✓

Purespring	✓	✓

Sourcing technology in growing areas has led to multiple Syncona companies and investments

The strength of our platform and the depth of our diligence allows us to identify new areas where there is the potential to found multiple companies

Syncona platform: a growing competitive advantage

Platform enables rapid translation of basic scientific research into companies with the potential to be global leaders

- Ability to identify a compelling new area of science where a differentiated business can be built
- Expertise to define the commercial opportunity for the science/innovation, develop company strategy and write the best business plan

- Increased capability, expertise and network to support company build out
- Growing reputation and track record enables us to attract the best managers at company launch

- Expert team with significant knowledge base to leverage across the portfolio
- Knowledge sharing across commercial, research and manufacturing aspects specific to cell and gene therapy
- Facilitate introductions of management teams across the portfolio

The background is a solid orange color with several large, overlapping geometric shapes in a darker shade of orange. These shapes include triangles and a large, rounded rectangle, creating a modern, abstract design.

Fund

Balance sheet strength is strategic and a key differentiator

Life science companies requires significant capital as they scale

Syncona capital base

£615m

to fund growing life science portfolio and found new companies

£150m-250m

FY 2021 capital deployment

based on further investment in our existing portfolio and the opportunities we see in our investment pipeline

Strong capital base is central to delivery of strategy and provides competitive advantage

- Founding investors have the best ability to set strategy
- Life science companies require significant capital as they scale; ability to maintain influence through financing rounds essential
- Balance sheet strength provides best negotiating position for external financing rounds or M&A
- Capital to execute ambitious vision optimises ability to attract the best academics, founders, managers and partners

Disciplined approach

- Each financing dependent on company specifics (scale of opportunity, risk, capital requirement) and size of Syncona's balance sheet
- Funding commitments tranching and based on milestone delivery

Market Context

The promise of precision medicine

Enables faster development, smaller, more capital efficient clinical trials and targeted commercial roll-out

- Traditional drug development can lead to ineffective drug development; it assumes all patients respond similarly
- Precision medicine can enable more effective therapies; genetics revolution has enabled greater insight into choosing low risk targets and selecting patients that will respond
- Many chronic diseases impacting millions of patients have genetic sub-drivers, permitting targeted drug development

30-60%

A traditional drug may only be 30-60% effective*

3x

Medicines targeted at defined patient groups 3x more likely to succeed than conventional drugs**

46%

Estimated reduction in the cost of the development of a precision medicine versus conventional medicine ***

Third Wave therapies have strong momentum

Syncona has established a leadership position in gene and cell therapy

“First Wave”

1950's

Small Molecule drugs, dominated by large pharmaceutical companies.

01

“Second Wave”

1990's

Large Molecule (antibody therapies, enzyme replacement therapies).

02

The “Third Wave”

Today

Advanced Biologics and genetic medicines such as gene therapy and cell therapy and DNA/RNA medicines.

03

10k

monogenic diseases, less than 50 with treatments

10

‘Third Wave’ therapies approved in the US

10

‘Third Wave’ programmes taken into the clinic by Syncona founded companies

8/10

Of Syncona's companies in Third Wave¹

Unless stated all data at 31 December 2020

* Source; Autolus Corporate Presentation January 2019

** Clinical pipeline updated to reflect the announcement by Autolus on 6 Jan 2021 that it intends to partner its AUTO 3 programme in DLBCL. Autolus is also running two extension clinical trials in AUTO1, one in Non-Hodgkin Lymphoma and one in Primary CNS Lymphoma

Investment thesis

- No CAR-T therapy approved for adult ALL for patients
- AUTO1 targets a differentiated safety profile (reduce high grade CRS⁵) and improved persistence to address limitations of current T cell therapies

Unmet medical need

- In lead programme of AUTO1, only 30-40% of patients with Adult ALL achieve long term remission with combination chemotherapy, the current standard of care*

Market opportunity

- 3,000 patients p.a. in lead programme of Adult Acute Lymphoblastic Leukaemia* (estimated new patients diagnosed per annum)

Freeline Therapeutics

Clinical-stage, fully integrated, next generation, systemic AAV gene therapy company

Board Seat	1 (Chair)
Date of Founding	2015
Date of Syncona investment	2015
Valuation basis	NASDAQ
Stage	Clinical
Syncona capital invested	£167.7m
No. of employees	200+
Competitor Landscape	The competitor landscape shows two main competitors: uniQure, marked with a '2', and Roche, marked with a '3'. Both are represented by their respective logos.
Key risks ^A	<ul style="list-style-type: none">- Highly innovative concept in emerging space

Clinical pipeline

Research | Target ID | Pre- Clinical | Clinical

Key management team

Theresa Heggie, Chief Executive (formerly Head of CEMEA at Alnylam Pharmaceuticals)

Julie Krop, Chief Medical Officer (formerly CMO at AMAG Pharmaceuticals)

Jan Thirkettle, Chief Development Officer (formerly led the establishment of GSK's cell and gene therapy platform)

Professor Amit Nathwani, Founder and Clinical and Scientific Adviser. Prof. Nathwani is renowned for his pioneering work on gene therapy for hemophilia B, and was first to show successful correction of bleeding diathesis in patients with severe hemophilia B

Markus Hörer, Founder and Chief Technology Officer (over 30 years' experience working in AAV biology, as well as over 23 years' experience in industrial vaccine and biologics development)

Romuald Corbau, Chief Scientific Officer (formerly Translational Lead at Spark Therapeutics)

Founders

Professor Amit Nathwani, as above

Markus Horer, as above, brought the Rentschler manufacturing platform to Freeline

For more information see: <https://www.freeline.life/about-us/our-team/>

Unless stated all data at 31 December 2020

*Source: Freeline Corporate Presentation January 2021

Investment thesis

- To deliver curative gene therapies that will transform patients' lives.
- Deliver therapies for a broad pipeline of systemic diseases which require the delivery of high protein expression levels

Unmet medical need

- Significant number of systemic diseases with genetic drivers which have poor or no treatment options
- Current standard of care in lead programme of Haemophilia B is Enzyme Replacement Therapy (ERT) (infusions of Factor IX (FIX) into the blood); requires regular administration, FIX activity does not remain stable

Market opportunity*

- 9,000 patient opportunity in lead programme in Haemophilia B
- 9,000 patient opportunity in Fabry's disease
- 6,000 patient opportunity in Gaucher's
- 38,000 patient opportunity in Haemophilia A

Gyroscope Therapeutics

Developing gene therapy beyond rare disease by understanding the immune system and the role genetics play in a patient's risk of developing late stage AMD

Board Seat	2 (inc. Chair)
Date of Founding	2016
Date of Syncona investment	2016
Valuation basis	Series B

Founders

Giovanna Lombardi, Professor of Human Transplant Immunology at King's College London

Marc Martinez-Llodella, Senior Lecturer at King's College London

Alberto Sanchez-Fueyo, Head of the Liver Sciences Department at King's College London

Hans Stauss, Director of the Institute of Immunity & Transplantation at UCL

Emma Morris, Professor of Clinical Cell and Gene Therapy at UCL

Elmar Jaeckel, Co-Leader Liver Transplant program MHH and Group Leader Immune tolerance" in the Department of Gastroenterology, Hepatology and Endocrinology at Hannover Medical School.

For more information see: <https://quell-tx.com/about/>

Investment thesis

- Current standard of care for prevention of solid organ transplant rejection is life-long immunosuppression which results in an array of serious long-term side effects significantly impacting patient quality of life¹⁷
- Potential pipeline to treat serious, chronic conditions mediated by the immune system
- Potential to be first-in-class in CAR-T-egs; an early mover in the space

Unmet medical need

- First programme addressing solid organ transplant; current standard of care to prevent transplant rejection is life-long immunosuppression, resulting in long-term side effects which materially impact quality of life and long-term survival

Anaveon Therapeutics

Immuno-oncology company developing a selective IL-2 Receptor Agonist

Board Seat	2 (inc. Chair)
Date of Founding	2017
Date of Syncona investment	2018
Valuation basis	Series A
Stage	Pre-clinical
Syncona capital invested	£11.7m
No. of employees	5+

Competitor Landscape

Key risks_A

- Highly competitive environment

Key management team

Andreas Katapodis, Chief Executive and Founder (former Director in the Autoimmunity, Transplantation & Inflammation group at the Novartis Institutes for BioMedical Research)

Christoph Bucher, Chief Medical Officers (Previously at Roche pRED Immunology, where he led the transition to the late-stage development of Crovalimab)

Christoph Huber, Chief Scientific Officer (previously held leadership positions at Roche, Pfizer and COI Pharmaceuticals)

Founder

Andreas Katapodis (as above)

Scientific Advisory Board

Jane K. Osbourn, Wolf H. Fridman and Robert Hawkins

For more information see: <https://anaveon.com/board/>

Investment thesis

- Developing a selective IL-2 agonist with improved administration and tox burden
- Wide potential utility across multiple oncology indications in wider Markets²³

Unmet medical need

- Human Interleukin 2 “IL-2” approved as a medicine for the treatment of metastatic melanoma and renal cancer, but with a frequent administration schedule and significant toxicity²²

OMass Therapeutics

Focused on structural mass spectrometry to discover novel medicines for immunological and genetic disorders

Board Seat	2 (inc. Chair)
Date of Founding	2017
Date of Syncona investment	2018
Valuation basis	Series A
Stage	Drug discovery
Syncona capital invested	£16.4m
No. of employees	25+
Key risks	
- Pre-clinical and clinical attrition of potential drugs	

Key management team

Rosamund Deegan, Chief Executive (former Chief Business Officer at Bicycle Therapeutics, where she established the company's Boston-based subsidiary)

Ali Jazayeri, Chief Scientific Officer (Previously Chief Technology Officer at Heptares)

Jonathan Hopper, VP of Platforms and Founder; worked with Carol Robinson on developing mass spectrometry

Founder

Professor Dame Carol Robinson, Founder and Scientific Adviser; recognised for using mass spectrometry to further research into the 3D structure of proteins and their complexes and is the first female Professor in Chemistry at the University of Cambridge

For more information see: <https://omass.com/our-team/>

Investment thesis

- Opportunity to build a drug discovery platform employing a differentiated Modified Mass Spectrometry technology with the potential to yield high quality chemical hits to discover novel small molecule drug therapeutics for a variety of complex targets, including membrane receptors

Resolution: harnessing the healing properties of macrophages

Macrophage cells are a key immune cell type

Based on the research of Prof. Stuart Forbes and Prof. John Campbell from the University of Edinburgh

Built over a 3-year partnership between Syncona and the University:

- Research Collaboration launched in Jan 2018 to develop the technology further
- Series A commitment of £26.8m from Syncona
- Vision to develop an autologous macrophage cell therapy for treatment of liver cirrhosis
- Syncona partners Ed Hodgkin and Gonzalo Garcia to become CEO and Chief of Staff respectively

Resolution of inflammatory organ damage
e.g., in a cirrhotic liver

1. Monocytes are precursor cells of macrophages

Purespring: one of the first kidney AAV gene therapy companies

New Syncona company in area of deep domain expertise

Source	2019	Syncona identified opportunity to apply gene therapy to kidney diseases	 Engaged with world leading KOL, Prof. Moin Saleem, University of Bristol	 Worked with Prof Saleem to identify potential programmes where gene therapy could be applied
Investment and strategic fit	£45m	Series A financing; carefully tranchised with initial investment of £3.9m ¹	 Key components of a 'Syncona company': world-class founder, differentiated technology and attractive clinical setting	 Deep domain expertise in gene therapy and successful approach to building platform companies in the space

Foundation of one of the first AAV gene therapy company's globally to target the kidney

1 Investment in Purespring made post period end

The Syncona Foundation

Supporting excellent charities that are meeting pressing needs within society, particularly those that are related to healthcare systems

Focused on cancer, neuro-degenerative diseases, gene therapy. Alongside other health and society related areas including mental health, bereavement and diversity

“The Syncona Foundation has been critical in equipping us with the ability to respond to emergencies. By allowing us to use donations flexibly, our frontline services have been able to respond quickly and effectively to the pandemic.”

Marie Curie

£31m

Donations since 2012

27

Charities donated to in 2020

0.35%

of Syncona's NAV donated on an annual basis
